WHAT IS THE SKINNY ON THE ANTIBACTERIAL SOAPS?

Antibacterial soaps are no more effective than regular soap and water for killing disease causing germs. According to the FDA there isn't enough science to show that over the counter antibacterial soaps are better at preventing illness than washing with plain old soap and water. To date no benefits have been proven in the usage of antibacterial soaps.

Here is what we can tell you about them:

- Long time usage has raised a question of potential negative effects on your health.
- The key ingredients Triclosan and Triclocarban haven't received a clearance of safe usage over a period of time.
- Also manufacturers haven't show that these ingredients are any more effective than plain soap and water in preventing illness and the spread of certain germs and infections. Some companies have begun to remove the two ingredients being you can't market them with your product.
- The ingredient Triclosan is actually found in many places such as clothing, kitchenware, furniture and toys to prevent bacterial contamination. Because of this we are already exposed to high levels of this chemical.
- Long time exposure contributes to making bacteria resistant to antibiotics.

- The following ingredients are still being tested as far as safety and effectiveness; benzalkonium Chloride, benzethonium chloride and chloroxyenol.

Here is what we are carrying for your hand washing needs...

- **Genuine Joe Liquid Hand Soap - 1 Gallon \$15.97**
- **GoJo Hand Soap (Coconut Fragrance) 1 Gallon \$14.97**
